

Encrypted files

Encrypted PDF files are not submittable in Grants.gov or the eRA Commons. SPA has had several Grants.gov packages and eRA Commons submissions with transcripts provided by the University of Minnesota where the file has been encrypted and would not transmit. SPA was able to scan the transcripts and re-add them to the proposal for successful submission. When adding PDFs provided by other sources check to see if the file has been encrypted, they are designated by the term (.pdf SECURED in the title line). Also this line of text may appear before the document:

Certified by Office of the Registrar, University of Minnesota, certificate issued by GlobalSign Primary SHA256 CA for Adobe.

If it has, please print out and rescan them into a PDF file. Do not try to create a new PDF from the file on your computer, as the encryption will remain embedded in the file.
